## Coverall Econ

Cat. I

### Econ white

The Econ coverall provides protection against dirt during activities and is also suitable for use as a coverall for people visiting workplaces. The material is perfectly breathable and guarantees high wearing comfort.

ECON coveralls can be easily washed at temperatures up to 30 degrees C. The line of Econ coveralls is available in two colors - white and blue. Blue coveralls are perfect for jobs where the clothes are likely to become dirty faster (e.g. maintenance and repair of machines). Blue color perfectly masks dirt. The user looks clean for a long time, unlike in the case of a white coverall. The blue color of the Econ suits also facilitates the issuing procedure, especially in plants where white chemical protection clothing of category III is also used (e.g. type 5 and 6 suits).

Depending on the nature of the work, the color of the suit can be easily selected. Therefore, only white coveralls will be visible in areas where chemical protective clothing is required.

### Econ blue

### Material:

Non-woven propylene

### Wight:

50 g/m<sup>2</sup>

### Colour:

White, blue

### CE:

Cat. I

### Application:

Dirty work, garden work, car repair, initial painting work, visiting workplaces, overalls for visitors, construction work, industrial coatings, machinery and equipment inspections, protection against harmless dust, protection of work and everyday clothes, hobby.
